Congenial Weather Condition for Pests & Diseases							
Fall Army worm	A threshold temperature of 10.9°C and 559 day-degrees C is required for development. Sandy-clay or clay-sand soils are suitable for pupation and adult emergence. Emergence in sandy-clay and clay-sand soils was directly proportional to temperature and inversely proportional to humidity. Above 30°C the wings of adults tend to be deformed. Pupae require a threshold temperature of 14.6°C and 138 day-degrees C to complete their development.						
Seed Rot	A threshold temperature of 10.9°C and 559 day- degrees C is required for development. Sandy-clay or clay-sand soils are suitable for pupation.						

Weather Warning
